

Founded in 1906 by innovative young engineer, Frank Moore, Moore & Wright has been designing, manufacturing and supplying precision measuring equipment to global industry for over 100 years. With roots fixed firmly in Sheffield, England, the company began by manufacturing a range of calipers, screwdrivers, punches and other engineer's tools. Following investment from Mrs Wright, a shrewd Sheffield businesswoman, Frank was able to expand the business and further develop his innovative designs.

By the mid-nineteen twenties, thanks to the company's enviable reputation, Moore & Wright was approached by the UK Government to consider manufacturing a range of quality micrometers. It was in this field that Moore & Wright's status as UK agent for the Swiss Avia range of products and subsequent acquisition of the Avia brand and manufacturing rights, proved invaluable. A set of working drawings was obtained from Switzerland and reworked based on popular American designs, whilst incorporating Moore & Wright's own innovations. The ensuing range of high quality instruments resulted in world renown for Moore & Wright micrometers. These early, classic designs are regarded as the origin of today's comprehensive range of micrometers, now used in every industrialised country throughout the world.

During World War Two, the overwhelming demand for Moore & Wright micrometers resulted in the opening of two further factories in England with production levels reaching an incredible 20,000 micrometers per month.

No. 961K As 961C, but no ratchet 37,7 m.
Tungsten-Carbide tipped Micrometers, see page 21.

By the end of World War Two, control of the company had passed to Frank Moore's daughter who subsequently sold the business to John Shaw Company in 1945. John Shaw recognised the skill and business acumen of the Moore & Wright staff granting them a level of autonomy. This allowed them to continue to develop innovative new products that could be marketed in both the UK and overseas. Soon the company was producing a diverse range of precision tools, including small hole gauges, telescopic gauges and a wide range of vernier calipers.

By the early 1950s Moore & Wright's vastly expanded product portfolio and increased levels of production, meant that it had outgrown its current production sites. The answer to the company's manufacturing bottlenecks was to be found in a new state-of-the-art production facility in Sheffield.

In 1970, Moore & Wright was acquired by Neill Tools Group, when the John Shaw Company was purchased by Neill Tools. The years that followed saw an increased threat to company sales from products exported to the UK from overseas manufacturers. Helped by the purchase of well-known micrometer manufacturer, Shardlow and the quality caliper producer Bensons, Neill Tools jealously defended Moore & Wright's business. The company also embarked on a progressive micrometer design and development programme. After adopting the suggested manufacturing and product design improvements, Moore & Wright launched Micro 2000, the world's first hand-held electronic micrometer. The company was proud to be awarded the coveted Queens Award For Technological Achievement in 1977 for this groundbreaking new product.

Now part of Bowers Group and with production facilities in the UK and China, Moore & Wright continues its commitment to supplying worldwide industry with high quality, affordable products. Its ongoing pledge to research and development should ensure that this great British company remains at the forefront of global innovation.

**CASE STUDY CALIPERS** 

### Moore&Wright Demonstrate Longevity in Practice with Tooling Specialists Robert Sorby

Working at the heart of the UK's steel and toolmaking industry since 1828, Robert Sorby has developed a truly global reputation for producing the finest edge woodworking tools. All its tools are made with the highest quality steel, which is hardened and tempered to its own specification. Polished flutes and hand-finished handles are typical of the quality and attention to detail that have always been the hallmarks of the Robert Sorby brand.

The use of hand tools, particularly Moore & Wright instruments, plays a crucial role in Robert Sorby's manufacturing processes. The Moore & Wright hand and workshop tools ensure precision, accuracy, and alignment of mating components, thereby facilitating smooth assembly, and improved final product quality.

Mark Furniss, Quality & Technical Engineer at Robert Sorby,

Moore & Wright hand tools are the backbone of precision and have been invaluable in the manufacturing of Robert Sorby's woodworking tools. With the exceptional accuracy and reliability, these tools enable our craftsmen to create the finest quality products that stand the test of time. Our partnership with Bowers Group is longstanding and the continued support from the team is second-to-none.

Every Robert Sorby tool is unique and hand-finished with the utmost care and attention to detail awarded to every piece, each of which is guaranteed to last a lifetime. By combining traditional processes - some of the techniques used to craft tools have remained unchanged for centuries - with modern equipment, Robert Sorby is able to blend 21st-century manufacturing methods with centuries-old crafting techniques.

The traditions of the company go hand in hand with its vision for the future. Always looking to develop new techniques and ways of working, with the sole purpose of enhancing its products and delivering a superior customer experience, which is why Robert Sorby works closely with reputable brands to fine-tune its manufacturing processes.

Moore & Wright tools have been an integral part of Robert Sorby's operations for the past two decades. These tools are primarily used in areas where inspection and precision play a critical role. By using Moore & Wright tools, Robert Sorby aims to maintain continuity, repeatability, and alignment accuracy of their components throughout the manufacturing

Used daily, shopfloor personnel predominantly utilise these tools, however they are readily available to anyone requiring them. This accessibility ensures that all team members can contribute to maintaining the high quality and precision standards set by the company.

The 1961M micrometer and the 150mm digital calipers are amongst the most frequently used Moore & Wright hand tools at Robert Sorby. The micrometer is employed for measuring critical diameters of turned components, while the digital calipers are used for length, depth, and dimensional measurements. Machining centre operators primarily rely on the digital calipers for their measurement needs.

The decision to invest in Moore & Wright tools was driven by multiple factors. Firstly, Robert Sorby's Quality Inspector had prior experience working with Moore & Wright tools not only as an apprentice but later in his career, and therefore recognised their value in maintaining exacting standards and tolerances. Additionally, the reputation of the Moore & Wright brand as a reliable and renowned tool manufacturer further solidified the decision to invest in their products.

The integration of Moore & Wright tools has brought about significant improvements for Robert Sorby. The tools are easy to use, providing a comfortable grip and ensuring accuracy in measurements. These precision instruments have solved the challenges posed by antiquated and unreliable measuring tools, resulting in enhanced product quality and improved manufacturing processes. The collaboration with Bowers Group, the distributor of Moore & Wright tools, has been exemplary, with prompt support and useful advice when needed.

By investing in these precision instruments, the company has achieved greater accuracy, maintained high-quality standards, and met customer expectations, as well as having become an essential element in achieving manufacturing excellence.

The partnership between Robert Sorby and Moore & Wright exemplifies the value of utilising top-quality tools to enhance processes and deliver superior products in the woodworking industry.

#### **CALIPERS**

## Internal **Digital** Caliper

#### At a Glance

• For measuring bores, internal grooves and other hard to reach inside dimensions

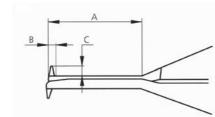

#### **Features**

- Large LCD display
- Functions: mm/inch conversion, on/off, zero setting, battery low indication
- Auto adjusting analogue display
- 0.005mm or 0.0002" resolution

Incorporating advanced electronics, these advanced gauges have the benefit of a large digital readout and an auto adjusting analogue display. These gauges are ideally suited for measuring bores, internal grooves and other hard to reach inside dimensions.

Bowers GROUP

#### **Features**

• The ball is hardened and moves freely to allow contact with the object being measured

Note: Always deduct the ball diameter from any reading.

878M

Micrometer Ball Attachment						
Code No	Description	Diameter (mm)	Diameter (inch)	Note		
878M	6.5mm and 6.8mm	6.5 ball		1 of each spindle size supplied		
878	0.256" and 0.268"		0.250 ball	1 of each spindle size supplied		

# Workshop Outside Micrometer 200 Series

#### At a Glance

 Can be fitted to the anvil or spindle on external micrometer series 1961, 1965 and 1966 to enable round or irregular surfaces to be measured

#### Features

- Standard: DIN 863
- Standard workshop model
- Resolution 0.01mm
- Satin-chrome scale
- Painted frame
- Tapered for easier access to difficult areas
- With tungsten carbide measuring face and constant force ratchet
- Packed in plastic box with standard and adjusting key

#### **MICROMETERS**

#### **Traditional** Internal Micrometers 900 Series

#### At a Glance

• Complies with: BS959

#### **Features**

• All models supplied in a fitted case

#### **MICROMETERS**

Each model comprises a measuring head, a set of extension rods and a spacing collar to facilitate alternative measuring ranges. The smaller models (901, 902 & 903) have detachable extension handles.

Traditional Internal Micrometers - 900 Series - Metric					
Code No	Range (mm)	Accuracy (mm)	Head Range (mm)		
901M	25-55	0.003	5		
902M	50-210	0.003	10		
903M	50-310	0.003	10

#### **CASE STUDY**

### Moore & Wright Fuel the University of Wolverhampton Racing Team in Formula Student Competition

UWR has set its sights on success at the Formula Student competition with the help of Moore & Wright metrology tools from Bowers Group.

The University of Wolverhampton Racing Team (UWR) has set its sights on success at the prestigious Formula Student (FS) competition with the help of Moore & Wright metrology tools from Bowers Group.

Formula Student is one of the most established international educational engineering competitions that aims to develop enterprising and innovative young engineers, as well as encourage more young people to take up a career in engineering. Organised by the Institute of Mechanical Engineers (IMechE), the event is celebrating its 25th anniversary in 2023.

It places rigorous demands on participating teams, requiring them to design, construct, and race a single-seat formula-style race car. The process is one in which precision engineering plays a vital role in ensuring both optimal performance and safety of the vehicle.

As part of the annual event, the UWR team faces the challenge of creating a car from scratch that not only meets rigorous performance standards but also adheres to strict design and manufacturing tolerances. Students must demonstrate project management and innovative features within the parameters allowed. They must start with a concept and operate almost as a business, incorporating engineering design and validation, project management, hands-on manufacturing, and testing.

Bowers Group has been a valued sponsor of the University of Wolverhampton Racing Team for many years, lending its support to students pursuing careers in engineering. This collaboration has been significant in providing students with exposure to industry-standard instruments and an understanding of precision measurement principles.

Through its sponsorship, Bowers Group supplies both the UWR team and the School of Engineering with the tools needed to both maximise racing performance and enhance practical learning. These instruments mirror what professionals use, giving students a chance to gain first-hand experience that goes beyond theoretical knowledge. This support helps bridge the gap between classroom learning and real-world applications.

Paul Bates, Technical & Business Resource Manager at the University of Wolverhampton, said:

The Moore & Wright tools available in our metrology suite offer hands-on experience for our students, including those in the Formula Student project. It helps them understand precision

measurement and the importance of accuracy.

These tools play a significant role in our Formula Student team's daily work. They rely on them for accurate measurements, and it is notable that many team members have even purchased their own sets. This speaks volumes for the tools' quality and reliability. It's great to see students carrying this practical knowledge into their future careers.

115

Moore & Wright hand tools contribute to ensuring accuracy and precision during the car's construction, providing reliable support as well as helping measure critical components, making sure they match the precise specifications in the design plans. Knowing that the brand is a trusted name for precision gives the team assurance as they work meticulously to construct the racing car.

The Moore & Wright digital caliper and digital micrometer provide UWR with versatile tooling that has assisted in a variety of projects during the build of the Formula Student car, including checks to improve speed, handling, and reliability.

The team uses the Moore & Wright caliper to measure components, check brake discs, assess wheel alignment, verify engine machining, and ensure safety cage integrity. It is also used to gauge wheel hub dimensions and ensure the accurate fit and finish of multiple components.

Its digital readout eliminates the potential for human error, providing UWR with reliable measurements down to the decimal point. This particular level of precision allows the team to fine-tune its suspension setup with confidence, giving a competitive edge when it comes to extracting the maximum performance from its Formula Student car.

#### Scottish Furniture Maker Achieves Precision and Quality with Moore & Wright Tools Ebony Hill uses a Moore & Wright Straight Edge and Precision Ebony Hill uses a 300mm Moore & Wright Precision

Engineers Square to make high quality furniture.

To assist with this process, Ebony Hill needed a quality straight edge that would be certain not to flex. In addition, an engineer's square was required as opposed to a combination square, in order to avoid fractional variations and achieve the highest levels of precision and accuracy.

Ben Lock, Managing Director and Furniture Restorer and Maker at Ebony Hill said:

Using the Moore & Wright engineers' square is the best way for me to set the angle of the straight edge: then I know that it is perfectly square. I used to panic doing long trenches, but since buying a the spring steel straight edge from Moore & Wright I'm finding them so much easier - the straight edge is great quality and never flexes due to it being 10mm thick!

Combine that with some F-clamps and a large Moore and Wright engineers' square, and perfect accuracy is a given. I prefer to use the engineers' square as I know it will be true every time, while in my experience, a combination square may vary a fraction from time to time. Once the straight is set and clamped, I run the base of the router off that, and the result is a perfectly

Engineers' Square to set the angle of the Moore & Wright Spring Steel Straight Edge. The Moore & Wright Precision Engineers' Square meets DIN 875 tolerance of the angle, with an accuracy of 0 (µm), and is made from heat treated steel which has been precision ground and micro-lapped. The two knife-form sides have an angle of 40°.

The Moore & Wright Spring Steel Straight Edge is manufactured to DIN 866/1, with a precision ground gauging surface manufactured out of spring steel, and clear metric graduations starting 5mm in from the ends. Once the Moore & Wright Spring Steel Straight Edge is set and clamped using F-clamps, Ebony Hill runs the base of the router using the straight edge as a guide to ensure that the result is straight, accurate and precise.

Based in Edinburgh, Scotland, Ebony Hill is a small business specialising in fine furniture restoration and conservation. In addition, the business also takes commission for custom pieces of furniture including cabinets, tables and gin trolleys.

Part of Ebony Hill's ethos revolves around the understanding that pieces of furniture, and heirlooms, deserve the highest levels of attention to detail. Every piece of furniture they restore has been lovingly made by persons who share this passion for quality and craftsmanship, and every piece they make is made with the very same care.

- Main vial sensitivity of 1 minute

# Traditional Hermaphrodite Calipers

### **Features**

### Firm Joint Adjustable Point

- Manufactured from polished tool steel
- A large headed nut and screw assembly provides a firm and rigid friction joint, with no play
- The sizes listed are the effective leg length which is measured from the joint assembly
- Leg which holds the round adjustable hardened point is offset
- Model 341 has a locating spur on the straight lea

Note: Firm joint caliper capacities are generally 1/3 greater than the effective leg length.

### Features - Spring Joint

- Manufactured from polished tool steel
- The marking leg is hardened to over 550Hv at the point
- Bow spring ensures uniform tension over working range
- Centrally mounted adjustment screw offers finer setting than firm joint type

# measuring and calculating the movement in BMW's variable valve system, VANOS, the quality of the machining, blueprinting and assembly are critical. It all comes down to the measuring equipment used. As always Bowers support is the best, a complete understanding of measuring and measuring processes is

In my opinion, no engineer's toolbox is complete without a vernier caliper. It's the first measuring tool to own when setting out in this trade! Without one, you may as well just guess a number."

felt whenever advice or support is needed.

Being able to offer an engine that not only performs

Whether it is piston to bore wall measurements or

well, but also offers longevity is one of our core beliefs. This all comes down to blueprinting each component.

Founded in 2013 by Ben Koflach, the business aim of Hack Engineering was to offer knowledgeable, reliable parts supplies in the UK. With vast experience working in the historic motorsport industry, Ben invested his skills forward into opening the first Hack Engineering workshop in 2016, increasing stockholding offering VANOS rebuilds and other engine work for BMW M cars.

### CASE STUDY

### Hack Engineering Ensures Quality Engine Builds with Moore & Wright Vernier Caliper

Moore & Wright vernier calipers are an invaluable tool for through process measurements on components used in performance engine builds.

Based in Barcombe, East Sussex, Hack Engineering rely heavily on Moore & Wright vernier calipers for carrying out through process measurements on components used in performance engine builds. Hack Engineering originated as a supplier of high-end performance parts for BMW, before undertaking exponential growth of the business that led to the opening of its first workshop, engine building facilities, part supply operations, and the creation of its own-branded machine shop.

Alex Lester, Technical Director at Hack Engineering said:

Every person in the business has access to a Moore & Wright vernier caliper, and even the parts department is regularly seen using one to assist customers with double checking component dimensions. Not only is quality increased, but the wastage of parts is also reduced as measurements can easily be taken throughout various manufacturing processes.

There are so many inferior verniers are out there, and with the heavy use ours get we decided to get one of the best. The Moore & Wright vernier caliper is the perfect tool for carrying out through process measurements and for quick sanity checks. It feels good in the hand and offers repeatable measuring time and time again.

Accurate measurement of engine components is critical to a quality engine build. When parts are machined or ordered incorrectly, it can have an adverse effect on both the performance and longevity of the engine, often resulting in a rebuild process that can hamper the profitability of the project.

It is important, therefore, to ensure that accuracy, precision and resolution is achieved throughout all aspects of the build, something that can be enhanced by choosing the correct, high-quality tools, like the Moore & Wright range of workshop tools.

Alex continued:

When dealing with performance engines, having the right equipment not only makes the job more efficient but also allows you to offer the customer a service and a product that makes you stand out from the rest. We are always of the opinion that anyone can build an engine. But building an engine that lasts and performs at its optimum involves patience, careful measuring, and extreme cleanliness.

# Traditional Inside & Outside Calipers

### Features - Inside & Outside Calipers, Firm Join

- Manufactured from polished tool steel
- A large headed nut & screw assembly provides a firm & rigid friction joint, with no play
- The sizes listed are the effective leg length which is measured from the joint assembly

Note: Firm joint caliper capacities are generally 1/3 greater than the effective leg length.

### Outside Calipers, Spring Joint

- Bow spring ensures uniform tension over working range
- Centrally mounted adjustment screw offers finer setting, than firm joint type

### Inside Calipers, Spring Joint

- Bow spring ensures uniform tension over working range
- Centrally mounted adjustment screw
- Manufactured from polished tool steel

Note: Firm joint caliper capacities are generally 1/3 greater than the effective leg length.

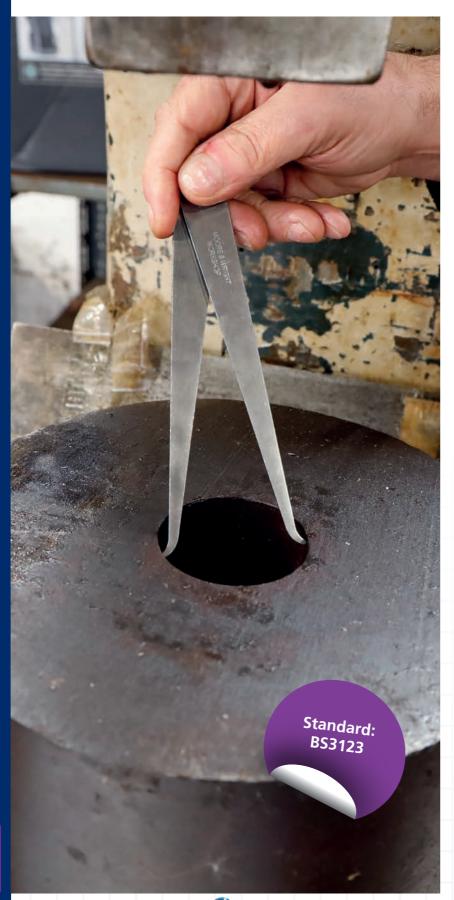

### **Spring Dividers**

- Manufactured from polished tool steel
- Points are hardened to over 550Hv
- Bow spring ensures uniform tension over working range
- Centrally mounted adjustment screw

Note: The nominal size is the distance between the centre of the roller and the working ends of the legs.

# Traditional Surface Gauges

### At a Glance

• Designed for precise marking out operations

### **Features**

- Hardened and tempered steel base, ground on one end and bottom face
- Vee groove for locating on cylindrical workpieces
- Two retractable locating pins
- Radial grooves in the side facilitate comfortable handling
- One handed fine adjustment
- Supplied with two interchangeable pillars and one 4mm diameter scriber

Note: Surface gauges can be used for mounting dial test indicators with either a 4mm or 6.35mm (1/4") mounting spigot.

### **HAND TOOLS**

### At a Glance

• Standard: DIN 2275

### **Features**

Caliper - Dial - 140 Series	20	Depth Gauge - Digital Inside / Outside	46
Caliper - Dial - 141 Series	21	— Depth Gauge - Digital Mini - 177 Series	45
Caliper - Dial - 142 Series	22	Depth Gauge - Digital Tyre Tread Gauge - 176-DTG Series	44
Caliper - Digital - 110-DDL Series	27	— Depth Gauge - Dial - 172 Series	42
Caliper - Digital Absolute - 110-DABS Series	28		
Caliper - Digital Depth Gauge - 170-DB/DH Series	39	Engineers' Sets	
Caliper - Digital External Groove - 120 Series	32, 34	Digital Engineers' Set	115
Caliper - Digital External Groove - 120-DABS Series	6	Engineers Set's	114
Caliper - Digital External Groove IP54	5	Hand Tools	
Caliper - Digital Internal Groove - 125 Series	33	— Basic Combination Set 520 Series	117
Caliper - Digital Long Jaw - 110-DLJ Series	35	Carbide Tipped Scriber	150
Caliper - Digital Pocket - 110 Series	24	Carpenters' Square	116
Caliper - Digital Vernier	4	Dial Bevel Protractor	121
Caliper - Digital with Interchangable Anvils	31	Digital Angle Rule	124
Caliper - External Digital	41	Digital Protractor	123
Caliper - Fine Adjustment Vernier - 111 Series	13	Digital Universal Bevel Protractor	123
Caliper - Fractional Reading Digital - DFC Series	26		160
Caliper - Heavy Duty Digital Workshop - 160-D Series	37	Feeler Strip 126M Series & Sets  Knife Straight Edge Rule 900 Series	148
Caliper - Internal Digital	40		
Caliper - IP54 Water Resistant	29	Powder Coated Calipers & Dividers	152
Caliper - IP67 Waterproof Digital	30	Precision Engineers' Bevelled Edge Square	146
Caliper - Large Digital Workshop - 150 Series	36	Protractor With Rule - 946 Series	125
Caliper - Large Workshop Vernier - 150 Series	14	Sliding 'T' Squares	147
Caliper - Long Jaw Vernier - 155 Series	16	Telescopic Gauges 315 Series Sets	149
Caliper - Mono Block Large Workshop Vernier - 152 Series	15	Traditional Depth Gauge	126
Caliper - Plastic Dial	19	Traditional Drill & Standard Wire Gauges	156
Caliper - Polycarbonate Digital	23	Traditional Engineers' Rules	143
Caliper - Precision Miniature Vernier - 110 Series	9	Traditional Engineers' Square	144
Caliper - Precision Vernier - 110 Series	10	Traditional Feeler Gauge Set - Precision Range	158
Caliper - Thumb Lock Vernier - 115 Series	11	— Traditional Hermaphrodite Calipers	151
